

House of Cards

Materials needed:

- An old deck of playing cards
- Scissors

Directions:

1. Cut about one inch notches on all side of the card (2 each on the longer edge, and one each on the shorter edges)
2. When all cards have notches in them, start building a structure by interlocking the notch of one card onto another card.

See how tall you can make your structure.

Variation:

Turn this into a mathematical game.

Add the cards together as you build to see whose structure is worth more "money".
