

CANDLE HOLDERS MADE FROM APPLES

Materials Needed:

- apple corer
- large apples that will stand up straight
- waxed paper
- stem candles
- lemon juice (optional)

Directions:

With the apple corer, make a hole about halfway through the middle of an apple. Make the hole as straight as possible and remove the core piece.

Insert the candle. The candle should fit tightly. If the hole is too big, wrap waxed paper around the candle end.

Repeat this process for each apple. For the brave of heart, carefully carve designs in the skin of the apple using the tip of a potato peeler (for adults only). To prevent the designs from turning brown, rub them with lemon juice.

For a base to place your candle holders on, use paper plate, or leaves, or a circle of foil.

This makes an interesting table decoration for both indoors and outdoors.
