

# Grass heads

## Materials needed:

1. One knee high nylon
2. teaspoon of grass seed
3. one cup of sand
4. permanent markers or paint.

## Directions:

- Pour grass seed into knee high, add sand.
- You might need a little more sand depending on the size of the knee high. Tie a knot in the knee high so sand does not fall out.
- Shape sand to form a head
- Draw, paint, or add plastic eyes for face. (Remember to use permanent markers or paint that will not come off in water.)
- Thoroughly soak grass head in water, then place in a cup or any container filled with water. Bottom of the knee high should be in the container of water.
- The actual grass head should be above water.
- Water top of head when needed.
- You should start seeing the grass seed sprout in about ten days to two weeks.
- As grass grows, you might even have to give it a hair cut!
