

Science Experiment: Scientific Process

One point of experimentation is to find out for yourself the answer to a question. In this experiment, you'll be creating and answering your own question about how ice cream melts.

An example might be: Will ice cream melt faster in a metal container or a plastic container?

Question: *Complete the question with your own conditions*

Will ice cream melt faster _____

Hypothesis: *Write what you think will happen.*

Materials: *List the materials needed for your experiment.*

Procedure: *Describe clearly how you set up your experiment.*

1. _____

2. _____

3. _____

4. _____

5. _____

Conclusion: *Write what actually happened & what the results might mean.*
