

## MINI SAILBOATS

### Materials Needed:

- walnut shells or acorn caps
- clay
- toothpicks
- scissors
- fun foam or a piece of plastic from a milk carton or construction paper.

### Directions:

Cut out a small triangle from the fun foam or piece of plastic.

Push a toothpick through the middle of the triangle in two places. This is your sail. Plastic or fun foam works best in case your sail gets wet.

Press some clay into the walnut shell or acorn cap.

Push the toothpick with the sail into the clay.

Put in water and puff on sail and watch your boat move.

Make several and have a mini sailboat race.
