

Ankylosaurus

Ankylosaurus had a bumpy back of armor that protected him from his predators. Predators could not penetrate his tough back. He also had a very powerful tail. Ankylosaurus was about 18-20 feet long and six foot high. **Herbivore**

Apatosaurus

Apatosaurus means *deceptive lizard*. Apatosaurus was about 18 m long and weighed about 30 tons. It had a very small brain. **Herbivore**

Brachiosaurus

Brachiosaurus was one of the largest dinosaurs. It was 25m long and weighed about 80 tons. Brachiosaurus means *arm lizard* **Herbivore**

Brontosaurus

A Brontosaurus is not a real dinosaur. It was mistakenly made in the 1870s by putting one dinosaur head on another dinosaur body.

Dimetrodon

Dimetrodon looks like he has a sail on his back. Dimetrodon is a meat-eating animal that lived during the Permian Period, roughly 280 million year ago. Dimetrodon lived before the dinosaurs and **is not really a dinosaur**. It was a mammal-like reptile. **Carnivore**

Diplodocus

Diplodocus is a plant eater. It has a long neck and a very long tail. The Diplodocus is one of the longest land animals. The Diplodocus walked on all four legs **Herbivore**

Iguanodon

One of the first known dinosaurs. It was named Iguanodon (*iguana tooth*) because its tooth looked like a large iguana's tooth. Iguanodon walked on its back legs, weighed about 7 tons and was about 30 feet long. Iguanodon had human-like hands with a sharp thumb that he used as a weapon. **Herbivore**

 <p>Protoceratops</p>	<p>This horned-faced dinosaur laid eggs in a sandy nest near a pond. Protoceratops was usually part of a herd that helped protect each other. Its sharp beak was its main defense against predators. Herbivore</p>
 <p>Pteranodon</p>	<p>Pteranodon was part of a group of dinosaurs called Pterosaurs, and was one of the largest flying reptiles. It was about 8 m across its wings. It had a bony crest on the back of its head, a pointed beak and no teeth. It would catch fish with its beak. Carnivore</p>
 <p>Pterodactyl</p>	<p>Pterodactyl lived in flocks and lived in trees or caves. It ate insects and lived near the sea. The smallest of the Pterosaurs. Carnivore</p>
 <p>Spinosaurus</p>	<p>This dinosaur looked like a Tyrannosaurus with a huge fin on its back. Scientists think the fin helped the dinosaur keep from getting too hot or cold. Carnivore</p>
 <p>Stegosaurus</p>	<p>Stegosaurus had a very small bird-like head compared to the rest of its huge body. Its brain was about the size of a walnut. Its back legs were twice as long as his front legs. The Stegosaurus had bony plates down its back and tail. He used his tail as a weapon. Herbivore</p>
 <p>Triceratops</p>	<p>Triceratops means <i>three horned face</i>. Triceratops uses its horns to fight off predators. Triceratops' head was huge - - about 1/3 of its body. Triceratops lived on the edge of the forest. Herbivore</p>
 <p>Tyrannosaurus Rex</p>	<p>T-Rex was one of the biggest and strongest dinosaurs. Tyrannosaurus Rex had two very strong legs and walked upright. He was about 20 feet high and 40 feet long. Each foot had three toes with claws. He had a huge head and very sharp dagger-like teeth. Carnivore</p>
